## Profile

DevOps Engineer with 3 years of experience designing, automating, and operating cloud infrastructure on AWS and Azure. Specializes in Kubernetes (Amazon EKS), Terraform-driven Infrastructure as Code, and CI/CD automation across multi-environment delivery pipelines. Experienced in building secure, highly available platforms for high-traffic and regulated workloads, including a national-scale digital identity system serving high-volume verification traffic. Strong in Linux administration, observability, cloud security, and cost optimization, with a track record of reducing manual effort through automation. AWS Certified Solutions Architect and CloudOps Engineer (Associate).

## Education

**Bachelor of Science in Software Engineering** — University of Dhaka — *Dhaka, Bangladesh* — **2020 – 2024**

- CGPA: 3.41 out of 4.00

## Experience

**DevOps Engineer II** — **Brain Station 23** — *Dhaka, Bangladesh* — **06/2025 – Present**

- Architected and managed Kubernetes platforms on Amazon EKS and ECS Fargate, configuring autoscaling, ingress, and health checks to keep multi-service workloads highly available under variable load.
- Automated cloud infrastructure provisioning with Terraform using reusable modules for compute, networking, IAM, databases, and serverless resources, reducing manual configuration and deployment time.
- Designed CI/CD pipelines with GitHub Actions, AWS CodePipeline, and CodeBuild, implementing blue/green and rolling deployments with automated migrations and rollback.
- Hardened platform security through AWS WAF, mutual TLS, KMS encryption, IAM least-privilege policies, and centralized secrets management via Parameter Store, Secrets Manager, and Azure Key Vault.
- Established observability across services using CloudWatch, Prometheus, Grafana, and Fluent Bit, improving incident detection and root-cause analysis in production.
- Administered managed databases and caching layers (RDS PostgreSQL, ElastiCache Redis) and message brokers (RabbitMQ, Amazon SQS, Amazon MQ) with performance monitoring and operational tuning.
- Conducted load testing with k6 to validate system capacity under peak traffic, and led cost and security optimization audits across AWS accounts.
- Collaborated with development, QA, and security teams on release planning, and authored technical documentation, SOPs, and operational runbooks.

**DevOps Engineer I** — **Brain Station 23** — *Dhaka, Bangladesh* — **02/2025 – 06/2025**

- Provisioned serverless and container infrastructure on AWS with Terraform, covering Lambda, DynamoDB, VPC, Cognito, and IAM with fully isolated resource boundaries.
- Built and maintained CI/CD workflows integrating automated testing, linting, and SonarCloud security analysis into every release.
- Containerized applications with Docker and Docker Compose, applying health checks, resource limits, and non-root execution for production readiness.

**Associate Software Engineer** — **Brain Station 23** — *Dhaka, Bangladesh* — **01/2024 – 02/2025**

- Built Docker-based deployment workflows and CI/CD pipelines, progressively taking ownership of cloud infrastructure for client platforms.
- Automated server provisioning, configuration, and routine operational tasks on Linux using Bash scripting.
- Supported production deployments and troubleshooting alongside development teams, resolving container startup, networking, and database connectivity issues.

## Skills

- **Cloud & Infrastructure:** AWS | Azure | Terraform | Linux | Networking | VPC | IAM | WAF | KMS
- **Containers & Orchestration:** Docker | Docker Compose | Kubernetes | Amazon EKS | Helm | Amazon ECR | ECS Fargate
- **CI/CD & DevOps Automation:** GitHub Actions | AWS CodePipeline | AWS CodeBuild | SonarCloud | Blue/Green & Rolling Deployments
- **AWS Services:** EC2 | S3 | RDS | ElastiCache | Lambda | API Gateway | AppSync | Cognito | CloudFront | ALB | Route 53 | SQS | SES
- **Azure Services:** App Service | Container Registry | Static Web Apps | Virtual Machines | Key Vault | Entra ID
- **Observability & Monitoring:** Amazon CloudWatch | Prometheus | Grafana | Fluent Bit | k6
- **Programming & Scripting:** Python | Django | Bash
- **Databases & Messaging:** PostgreSQL | MySQL | DynamoDB | Redis | RabbitMQ | Amazon MQ | Celery

## Certifications

**AWS Certified CloudOps Engineer – Associate**

Validates hands-on expertise in deploying, monitoring, securing, and cost-optimizing production workloads on AWS. (Valid until 08/2026)

**AWS Certified Solutions Architect – Associate**

Demonstrates expertise in designing secure, resilient, cost-optimized, and scalable architectures on AWS. (Valid until 05/2026)

## Achievements

- **2nd Runner-Up** — DevOps Hackathon, 11th National IUT CSE Fest (2024)
- **1st Runner-Up** — Microservice & DevOps Hackathon, BUET CSE Fest (Oct 2024)
- **National Winner** — Bangladesh Junior Science Olympiad (2017) and Bangladesh Astronomical Olympiad (2016, 2017)
- **Regional Winner** — Bangladesh Mathematical Olympiad (2015)
- **National Champion** — Camper, HSBC Prothom Alo Vasha Protijog (2014)
- **1st Prize** — 38th National Science and Technology Week, Divisional Round (2017)
- **2nd Prize** — 37th National Science and Technology Week, Divisional Round (2016)

## Key Projects

### 1. OneID — National Digital Identity & eKYC Platform

- Architected and managed Kubernetes infrastructure on Amazon EKS with autoscaling, ingress, and workload configuration supporting a multi-service national identity platform.
- Automated CI/CD pipelines with AWS CodePipeline and CodeBuild, enabling consistent, repeatable, fully isolated releases across the platform.
- Hardened platform security with AWS WAF rule sets, mutual TLS for service-to-service authentication, KMS encryption, and restricted network access on privileged infrastructure.
- Established full-stack observability using Amazon CloudWatch and Fluent Bit, improving incident detection and root-cause analysis across all services.

  **Link:** oneid.com.bd/login

### 2. Scalable Ticket Booking Platform for Nationwide Cricket League

- Built a high-traffic ticket-selling platform for a nationwide cricket league, ensuring scalability and high availability during traffic surges.
- Managed AWS infrastructure (EKS, EC2, RDS, API Gateway, Cognito), optimizing performance and ensuring secure, reliable operations.
- Automated infrastructure provisioning and built CI/CD pipelines with Terraform, reducing manual configuration and deployment time.
- Led load testing with k6 to validate system capacity under peak traffic, monitored through Prometheus and Grafana dashboards.

### 3. SkyClub365 — Airline Travel & Loyalty Platform

- Designed Docker-based CI/CD pipelines with AWS CodeBuild and Amazon ECR for six .NET microservices and two Angular portals, publishing versioned images for every release.
- Deployed application workloads to Amazon EKS using Kubernetes manifests with parameterized configuration, ingress routing, and health checks.
- Implemented deployment smoke testing across service health, authentication, payments, and ticketing to catch release defects before production.

### 4. Sykehus Partner — Device Management Platform

- Delivered DevOps support for a Norway-based healthcare client, maintaining GitHub Actions workflows deploying a Vue 3 frontend to Azure Static Web Apps and a Django backend to Azure virtual machines with automated release verification.
- Configured Azure authentication with Microsoft Entra ID and managed certificates and secrets through Azure Key Vault.
- Integrated SonarCloud quality and security analysis into the pipelines, strengthening code quality gates on every release.

### 5. Antec — Serverless Reseller & Product Catalog Platform

- Designed and maintained AWS infrastructure for a Norway-based client entirely through Terraform, with reusable modules for Lambda, DynamoDB, VPC, Cognito, Amplify, IAM, and security groups.
- Produced and reviewed Terraform plans to validate every infrastructure change before deployment, keeping resource boundaries fully isolated.
- Applied IAM least-privilege access controls, TLS database connections, encrypted storage, and Parameter Store-managed secrets.
